Introducing CommunO₂

The CommunO₂ SuperApp provides consumer engagement, empowerment, and independence.

It is a community-wide “utility” bringing the benefits of modern information and communication technologies to all.

CommunO₂ is safe, secure, engaging, ad-free, and extremely easy to use.

Computing Simplified

Without CommunO₂, every app a user tries to use has its own user interface, login, nuances, learning curve, and support (or lack thereof). The CommunO₂ SuperApp provides an easy, single sign on, integrated and consistent user interface for a wide range of capabilities.

With a focus on safer computing for all, the CommunO₂ SuperApp capabilities add meaning and quality of life for people everywhere.

Community Model

Made possible by the unique CommunO₂ Community Partnership Program, the community model enables individuals and families to always remain supportively connected with the people, services and organizations that are important to them.

Every consumer-facing organization can connect with its customers, members, patients, congregants, and other stakeholders in new and unique ways.
A COMMUNO₂ COMMUNITY
is comprised of...

- A single county, municipality, region or community of interest
- Healthcare and social services
- Community based organizations
- Local retail merchant organizations
- Professional service providers
- Public libraries, government offices, community and senior centers
- Churches, synagogues, mosques, temples, and all communities of faith
- Independent housing, assisted living, group homes and long term care
- Education, arts & culture, and tourism

Using CommunO₂
Communities support residents and organizations by...

- Connecting family members and friends anywhere in the world for services and events when physically attending the event isn’t possible or practical.

- Enabling viewers to experience and engage in live streamed events such as a community activity or organization gathering, one-on-one appointments, community education classes, weekly faith-based services or municipal and community gatherings.

- Providing personalized assistance to community residents through face-to-face on-screen video connections with city staff, merchants, and other services.

- Enabling face-to-face televisits with doctors, nurses, pharmacists and health coaches, as well as clergy, educators, and customer support services.

- Implementing “e-Volunteering” and “e-Respite” programs, giving community youth as well as adults at home or at work new and flexible opportunities to reach out to help others in the community or to receive assistance from others.
